

Asian Longhorned Beetle & Firewood

Don't Move Firewood! Buy Local!

Stop the Spread of Wood Boring Pest!

The Asian Longhorned Beetle (ALB)

The Asian Longhorned Beetle is 1 to 2 inches in length with long antennae. Its jet black body is covered with white spots. The antennae have white and black banding.

Also Known As:

(*Anoplophora glabripennis*)

Starry Sky Beetle

Maple Death Beetle

The Asian Longhorned Beetle, a **TREE KILLER**, infects wood by laying its eggs in hardwood trees. Firewood can harbor many different kinds of invasive pests and diseases that can kill large numbers of trees once transported into new areas. By buying or transporting firewood you can potentially spread this or other destructive pests to your yard and town.

News Alert! - ALB found in Cranston cordwood!
